Editorial Policy

Contributing to realizing an affluent society by promoting sustainable development of the market lies at the heart of JPX’s corporate philosophy. We believe that our efforts to realize this corporate philosophy will enable us to both create sustainable value and fulfill our corporate social responsibility. Our goal in publishing this JPX Report 2019 is to provide readers with a deeper understanding of this idea and our initiatives in business activities.

This report consists of four chapters. First, “Overview of JPX” illustrates JPX’s corporate philosophy, role in society, and business model, etc. “Strategies for Creating Value” explains the progress made under our management plan. Then, we introduce our varied initiatives for creating value in “The Foundations of Value Creation,” and lastly, we provide an outline of JPX’s “Financial and Corporate Data”.

August 2019
Who we are...

Japan Exchange Group, Inc. (JPX) was formed through the merger between Tokyo Stock Exchange Group and Osaka Securities Exchange in January 2013.

More than 140 years ago in 1878, soon after the Meiji Restoration, Eiichi Shibusawa, who is known as the father of capitalism in Japan, established Tokyo Stock Exchange. That same year, Tomoatsu Godai, a businessman who was instrumental in the economic development of Osaka, established Osaka Stock Exchange.

JPX has inherited the will of both Eiichi Shibusawa and Tomoatsu Godai as the pioneers of capitalism in modern Japan, and is determined to contribute to driving sustainable growth in the Japanese economy.

JPX Organizational Structure

[Diagram showing the JPX Organizational Structure with Japan Exchange Group, Inc. at the top, branching out to Cash Equities Markets, Derivatives Markets, Self-Regulation, and Clearing. Each branch includes relevant companies such as Tokyo Stock Exchange, Osaka Exchange, Japan Exchange Regulation, and Japan Securities Clearing Corporation.]
Corporate Philosophy

Contributing to realizing an affluent society through sustainable market development

Our mission is to contribute to the realization of an affluent society by promoting sustainable development of the market.

Committed to our public nature and credibility, we build highly convenient, efficient, and transparent markets, and provide creative and attractive services.

Our efforts help us attract the support and confidence of investors and market users and reap the rewards in the form of profits.

Management Policy

Sail to the future. Keep the market secure.

Under rapid innovation and global dynamics, we aim to evolve into a total smart exchange, where anyone can trade any product in a secure and easy way, by further cooperating with stakeholders and entering into new partnerships.
The Role of Exchange Markets

The markets established by JPX provide companies with business financing methods, investors with asset management opportunities, and society as a whole with price discovery functions. By fulfilling these social roles, we contribute to realizing an affluent society through sustainable market development.
1. Overview of JPX

Business Model

In addition to TSE, which handles cash equities markets, and OSE, which handles derivatives markets, the corporate group also includes a self-regulatory subsidiary, which carries out the examination and supervision processes needed to maintain market quality. Our comprehensive services also encompass clearing and settlement functions.

Notes:
1. The number of companies and issues are as of Mar. 31, 2019.
3. Tokyo Stock Exchange Regulation was renamed Japan Exchange Regulation on Apr. 1, 2014.
4. Tokyo Stock Exchange, Osaka Exchange, Japan Exchange Regulation, and Japan Securities Clearing
As consideration for JPX services, we receive various fees from market participants such as trading participants (i.e., securities companies), listed companies, and information vendors. Specifically, our sources of revenues are (1) revenues from trading services, (2) revenues from clearing services, (3) revenues from listing services, and (4) revenues from information services.
Creating Value at JPX

Vibrant securities markets are essential to economic development and general prosperity. Expanding the base of market participants is a key factor for sustainable growth and requires a robust financial market infrastructure, together with continuous provision of diverse products and services.

JPX's Strengths

1. Diverse Human Capital
   - Human resources with free and creative thinking from a broad perspective
   - Number of Employees: 1,110

2. Solid Physical Assets
   - System infrastructure that provides stable operations
   - Order response time using arrowhead is about 0.3 milliseconds

3. Healthy Financial Position
   - Total equity attributable to owners of the parent company: JPY 257.0 billion
   - Ratio of total equity attributable to owners of the parent company to total assets: 71.5%

4. Strong Client Assets
   - Relationships with companies, trading participants, and investors cultivated over a long period
   - Number of listed companies: 3,663
   - A reliable and secure social brand
   - Maintenance of listed product brands
   - Number of IPOs: 103

Notes:
1. Figures are for FY2018 results and as of the end of FY2018.
2. Calculated by subtracting “default compensation reserve funds” from “total equity attributable to owners of the parent company” in the Consolidated Statement of Financial Position
3. Total equity/assets figures exclude “clearing business assets”, “deposits from clearing participants”, “legal guarantee funds” and “default compensation reserve funds”

Contributing to realizing an affluent society

Medium-to Long-Term Future
Total Smart Exchange
An exchange where anyone can trade any product safely and easily

Strategies to extend JPX’s strengths
JPX’s aim is to realize the sustainable development of securities markets and contribute to the creation of a more affluent society. To this end, JPX ensures the reliability of securities markets and operates them in the public interest, works continuously to create a market base that is convenient, efficient, and transparent, and offers higher value added through creative and attractive services.

Created Value

Society ➞ P.12–15
- Stable operation of capital markets that support economic activity
- Provision of price discovery functions
- Support for national asset formation

Companies ➞ P.22–23
- Improved corporate governance
- Provision of flexible business financing methods

Investors ➞ P.44–49
- Greater financial literacy
- Promotion of the shift from savings to investment
- Offering the safe and reliable settlement of transactions

Shareholders ➞ P.52–53
- Enhanced corporate value over the medium- to long-term

Employees ➞ P.56–58
- A working environment that allows employees to perform to their full potential

through sustainable market development issues and the growth of JPX
Since their establishment in 1878 shortly after the Meiji Restoration, both the Tokyo and Osaka exchanges have consistently served as the engine of the Japanese economy, responding to the needs of the times for over 140 years. JPX will continue to contribute to the sustainable growth of the Japanese and the global economies.

**History of the Japanese Economy and Key Global Developments**

1878 A group including Eiichi Shibusawa, who is known as the father of capitalism in Japan, establishes Tokyo Stock Exchange. That same year, a group including Tomoatsu Godai, a businessman who is instrumental in the economic development of Osaka, establishes Osaka Stock Exchange.

1949 Tokyo Stock Exchange (TSE) and Osaka Securities Exchange (OSE) are established as membership organizations and begin equity trading in May of that year.

1969 Calculation of Tokyo Stock Price Index (TOPIX) begins.

1973 Foreign stocks are listed in response to internationalization.

1974 TSE’s Market Information System goes into operation to deliver the latest information to investors.

1982 TSE launches the Second Section Trading System and promotes systematization in the securities market.

1985 TSE begins trading of government bond futures.

1988 TSE begins trading of TOPIX Futures and OSE begins trading of Nikkei Stock Average (Nikkei 225) Futures.

1989 Nikkei Stock Average reaches record high of JPY 38,915.87.

1991 Nikkei 225 Futures becomes the world’s most traded contract on a trading value basis.

1992 TSE launches Mothers, a market for new emerging companies, and OSE follows suit with Nasdaq Japan (now integrated into JASDAQ).

1997 Asian currency crisis

1999 Bank of Japan’s zero interest rate policy.

2000 Euro goes into circulation.

2002 Global financial crisis

2007 The Greek crisis spreads to Southern European and other eurozone countries (European sovereign debt crisis).

1944 Japan pegs yen exchange rate to the U.S. dollar.

1952 Japan joins the IMF.

1965 First deficit-financing bonds are issued.

1971 Nixon shock

1973 Yen transitions to floating exchange rate

1979 2nd oil crisis

1988 Trading value and market capitalization of TSE both become world’s No. 1.

1997 Financial and Non-Financial Highlights

1988 Trading value and market capitalization of TSE both become world’s No. 1.

1997 Financial and Non-Financial Highlights

1989 Nikkei Stock Average reaches record high of JPY 38,915.87.

1992 TSE launches Mothers, a market for new emerging companies, and OSE follows suit with Nasdaq Japan (now integrated into JASDAQ).

1992 TSE launches Mothers, a market for new emerging companies, and OSE follows suit with Nasdaq Japan (now integrated into JASDAQ).

1882 The Bank of Japan is founded.

1929 The Great Depression

1952 Japan joins the IMF.

1965 First deficit-financing bonds are issued.

1971 Nixon shock

1973 Yen transitions to floating exchange rate

1979 2nd oil crisis

1988 Trading value and market capitalization of TSE both become world’s No. 1.

Average Daily Trading Value and Number of IPOs are in trillion for cash equities and for Tokyo Stock Exchange, respectively. Average Daily Trading Volume is in million contracts. Proportion of Outside Directors is in percentage. Employees’ Average Years of Service are in years. Financial and Economic Lectures are provided to people.
2. Strategies for Creating Value

JPX’s mission is to contribute to the realization of an affluent society by promoting sustainable development of the market. In order to carry out this mission, we are working to create value by evolving into an exchange where anyone can trade any product in a secure and easy way. To this end, we are further cooperating with stakeholders and entering into new partnerships.
JPX’s mission, as stated in our Corporate Philosophy, is to "contribute to the realization of an affluent society by promoting the sustainable development of the market by ensuring our public nature and credibility, constructing the foundation of the market which is highly convenient, efficient, and transparent, and providing creative and attractive services." In the belief that our efforts help us attract the support and confidence of investors and market users and reap the rewards in the form of profits and in our capacity as the provider of Japan’s core market infrastructure, we recognize the provision of stable market operation on an ongoing basis as the most important aspect of that mission.

Our Corporate Philosophy expresses the goals and values that guide our business activities and underpins our management policies and decisions. All JPX officers and employees constantly bear this philosophy in mind in the performance of their day-to-day tasks.
Looking Back at FY2018: 2nd Medium-Term Management Plan

In our medium- to long-term vision, we aim to realize a well-balanced business portfolio that does not rely excessively on Japanese stock market conditions. To achieve this, JPX focused on four core initiatives under its 2nd Medium-Term Management Plan: (1) satisfying diverse investor needs and encouraging medium- to long-term asset building; (2) supporting listed companies in enhancing their corporate value, including by enhancing the effectiveness of their corporate governance; (3) reinforcing market infrastructure, such as by strengthening business continuity planning (BCP) and shortening the Japanese government bond (JGB) settlement cycle; and (4) creating new fields of exchange business, such as by promoting the utilization of fintech.

With regard to the first core initiative, “encouraging medium- to long-term asset building,” we made progress in efforts such as the market making incentive scheme for the development of the ETF market and successfully developed new indices, such as an index that was selected by the Government Pension Investment Fund (GPIF) as one of its Global Environmental Stock Indices. In the case of the second core initiative, “enhancing listed companies’ corporate value,” we made efforts, ranging from the formal to the substantive, such as through revisions to the Corporate Governance Code, to bring about more deep-rooted corporate governance. For the third core initiative, “reinforcing market infrastructure,” in addition to successfully achieving a shortening of the JGB settlement cycle to T+1, we made significant progress in enhancing the backup capabilities of the Tokyo and Osaka bases and believe that further improvements have been made in terms of the reliability of the Japanese market. Lastly, with regard to the fourth core initiative, “entering new fields of exchange business,” we are conducting PoC testing of blockchain technology in a consortium with a wide range of participants from the finance and securities industries, and are advancing studies into the practical application of new technologies. As a result, JPX has made significant progress in transforming into an entity that is not heavily reliant on the market conditions in Japan and, with regard to net income, continued on from the previous fiscal year by also achieving our target for the final year of the Plan. Furthermore, on March 28, 2019, in a move cited under the 2nd Medium-Term Management Plan as one of the important issues toward the realization of a comprehensive exchange, we reached a basic agreement on a business combination with Tokyo Commodity Exchange.

- The target for net income set for the last year of the plan (FY2018) was achieved in FY2018, and also ahead of schedule in FY2017.
- Made great progress in transforming into an entity not heavily reliant on financial market conditions in Japan, by expanding our ETF market and developing side businesses such as index and information services, co-location, and clearing of OTC JGBs.

### Main Achievements

**Asset building gained momentum**
- More ETF holders (+129,000)
- New ETF market making incentive scheme
- New global environmental indices

**Corporate value of listed companies increased**
- Revised corporate governance code
- Yearly IPO count steady: averaging 81 over past 3 years
- Expanded ETF product lineup

**Reinforced market infrastructure**
- Shortened JGB settlement cycle to T+1
- Enhanced backup capabilities in Tokyo and Osaka
- Strengthened market surveillance based on HFT registration regime

**Entered new fields of exchange business**
- Advanced PoC testing for utilization of Blockchain
- Incorporated AI into market surveillance
- Listed products related to sustainability
Significance of “Sail to the Future. Keep the Market Secure.”

In Japan, it is expected that the impact of medium- to long-term demographic and economic factors, including the falling birth rate and aging population, budget deficits and the policy of monetary easing, will rapidly become apparent. The outlook globally points to heightened political risks surrounding fiscal policy trends in the U.S. and Europe and to U.S.-China economic issues, such as trade. Furthermore, the Japanese government has expressed its intention to tackle issues surrounding financial and capital markets in its growth strategies (Future Investment Strategy 2018). These include advancing corporate governance reforms, improving the quality of information disclosure for the purpose of constructive dialogue, and boosting medium- to long-term investment by advocating for more disclosure of ESG, climate-change-related, and other topical information. Another major issue raised is generating momentum in financial and capital markets such as by encouraging stable asset building for households, providing financial services compatible with an aging society, realizing a comprehensive exchange, and shortening the stock settlement cycle to T+2.

In such an environment, and given that we recognize the provision of stable market operation on an ongoing basis as the most important aspect of our mission, in March 2019 we published the 3rd Medium-Term Management Plan (2019-2021) with the slogan of “Sail to the future. Keep the market secure.”

“Sail to the future." makes reference to that fact that it will be extremely important for us to quickly adapt to or boldly confront increasingly rapid technological change and other changes in the market environment to continue fulfilling our responsibility to the market.

“Keep the market secure." encapsulates JPX’s role as market infrastructure that provides investors with asset management opportunities and companies with opportunities to raise funds, and that also underpins society. With it, we express our intention to remain committed in the years to come to our original mission of providing a stable market that is secure and reliable.
Evolution into a “Total Smart Exchange”

As our medium- to long-term vision, JPX is aiming to evolve into a “total smart exchange,” an exchange that enables anyone to trade any product safely and easily, not only stocks and related products but also similar and peripheral fields, such as commodities.

From now on, through the steady implementation of the 3rd Medium-Term Management Plan, we will be moving into a phase designed to increase medium- to long-term growth, such as in terms of trading volumes that form the basis for revenue generation. It will, however, be essential to constantly keep in mind that JPX is subject to global competition. With regard to the enormous amounts of investment funds that are constantly being moved around the world, it will also remain important for JPX to continue to function as a pivotal trading venue in the Asia-Pacific region time zone. In that sense as well, we believe that the “total smart exchange” will be an essential policy for Japan to survive as one of the key markets in the world.

Initiatives in Global Strategy

Aim to continue being a leading market in the world as a pivotal trading venue in the APAC region, which contributes to global wealth accumulation through further stimulating capital circulation

- Take measures to yield flow and investment in Japanese equity from global investors getting influence in the world
- Improve reputation of listed companies among investors through better corporate governance and enhancement of dialogue between investors and listed companies
- Evolve into a commodity derivative market with true pricing function via early launch of a comprehensive exchange
- Boost activity in the ETF market by improving liquidity and efficiency of settlement
- Conduct marketing in foreign offices and develop HK office
- Support for global issuers to capitalize on Japanese markets (PRO-BOND market, crossborder listings)
- Support development of Myanmar’s capital market
- Promote global cooperation with foreign exchanges (primarily in Asia) such as Japan-China ETF connectivity
- Conceptualize a next-generation platform for cash products that adapts to global trends and innovation
- Improve connectivity of investors with arrownet global connect
- Create a lineup of listed funds based on overseas assets
- Respond appropriately to international financial regulations (i.e. those of IOSCO and EU on clearing houses and index providers)

For the Realization of an Affluent Society

For JPX, fulfilling our core business of stable market operation is an important social responsibility. In view of our public nature and neutrality requirements for business content, we will pay full attention to the improvement of corporate governance based on compliance, management transparency, and accountability. On that basis, we will be making full use of the management resources of our core business to contribute widely to society through a raft of activities, such as financial economic education, international cooperation with overseas exchanges, and academic research.

As we serve as core infrastructure for financial and capital markets at the heart of the Japanese economy, JPX will strive to engage and gain the understanding of our domestic and global investors, listed companies, trading participants such as securities firms, as well as of regulators and the general public as we target the country’s economic revitalization.

We deeply appreciate your continued support and ask that you walk alongside us on our journey forward.
## Financial Policies

### Financial Targets under the 3rd Medium-Term Management Plan

JPX achieved its net income target for FY2018 of JPY 48.0 billion under the 2nd Medium-Term Management Plan, which covered the three-year period from FY2016 to FY2018. This reflects the significant strides made in transforming JPX into an entity not heavily reliant on stock market conditions in Japan, by expanding its ETF market and developing index and information services, co-location, JGB clearing, and other peripheral business segments.

In line with the slogan of the 3rd Medium-Term Management Plan, “Sail to the future. Keep the market secure,” JPX will work toward attaining operating revenue of JPY 130.0 billion, net income of JPY 50.0 billion, and an ROE of 15.0% or higher by FY2021, the final year of the plan. To this end, we will launch and develop a comprehensive exchange and diversify our data offerings as part of our efforts to steadily implement core strategies while investing in our systems and business continuity plan (BCP) to enhance the reliability of the Japanese market.

### Capital Policy for Sustainable Development of the Market

JPX’s fundamental capital policy is aimed at supporting the sustainable development and evolution of the market, by making ongoing investment while striking a balance between shareholder returns and ensuring financial resilience for stable market operations. Under this policy, we seek to achieve ROE of around 10% in the medium to long term regardless of market conditions.

Specifically, we set a dividend payout ratio of approximately 60% and will flexibly consider increasing returns to shareholders as we examine future investments and other such factors as they arise. For FY2018, the total dividend payout per share was JPY 70. This amount comprises an ordinary dividend of JPY 55 based on the aforementioned payout ratio and an additional special dividend of JPY 15 on account of achieving the profit target under the 2nd Medium-Term Management Plan, as well as to commemorate 140 years of exchanges in Japan.

IT Master Plan

IT Strategy as the Source of Our Competitiveness

Exchanges provide venues to gather large numbers of sellers and buyers. Today, those venues are provided on systems, and the quality of these systems and their capabilities have a direct bearing on exchange competitiveness.

In order to meet the needs of increasingly sophisticated and complex market users and become their market of choice, exchanges must constantly improve systems infrastructure to enhance convenience for market users. At the same time, the most important mission for exchanges, as core financial infrastructure, must be to provide sound venues underpinned by stable systems operations.

As such, JPX formulated the IT Master Plan in line with the Medium-Term Management Plan to pursue specific IT initiatives that balance two approaches – steadily implementing initiatives focused on system reliability, efficiency and availability, and maintaining the agility required to respond to drastic changes in the external environment and technological diversification.

Pushing the Limits and Leveraging Technology to Enhance Corporate Value

In our upgrades and other system initiatives, JPX has continuously pushed the limits and worked diligently to create a highly skilled, positively charged organization. We will continue to boldly take on new challenges as we work to enhance the corporate value of JPX by positioning IT as a source of and means to sharpen our competitive edge. We will employ the latest in rapidly evolving technologies to the greatest extent possible so as to construct and provide highly reliable and convenient market infrastructure and services.

Specific Measures

- **Medium-term Management Plan**
  - I - Pursue “the shape of the market” toward the next generation
  - II - Launch and develop a comprehensive exchange
  - III - Diversify and propel data services into the next generation
  - IV - Develop a foundation to support the future of our business and the society

- **For sustainable market operations**
  - I - Improve reliability and convenience via system upgrades
  - II - Carry out flexible launches of new products and functions
  - IV - Improve BCP measures by building new secondary center
  - IV - Optimize operations via cloud and automation

- **For agile responses to change**
  - I - Raise the topline by building new platforms
  - III - Use accumulated information resources
  - III - Diversify channels that enable flexible information distribution
  - IV - Proactively adopt advanced technology
  - IV - Train/develop human resources to use technology
2. Strategies for Creating Value

Core Strategy

Pursue “the shape of the market” toward the next generation

Raise global competitiveness by pursuing “the shape of the market” toward the next generation while working on enhancing the appeal of the Japanese market in various ways, from reviewing TSE’s market structure and improving corporate governance to moving to T+2 stock settlement cycle.

Initiatives

1. Build market platforms that adapt to market needs and external changes
   - Replace the platform for cash product trading (arrowhead) and systems for off-auction trading and index calculation
   - Develop a next-generation derivative platform that enables timely launches of new products
   - Conceptualize a next-generation platform for cash products that meets diverse trading needs and adapts to global trends and innovation

2. Develop TSE’s market structure & enhance corporate governance at listed companies for a more appealing Japanese market
   - Aiming to enhance the investment appeal of the Japanese market and encourage listed companies to raise corporate value:
     - Review TSE’s market structure
     - Further enhance substantial aspects of corporate governance at listed companies and cultivate an environment conducive to more dialogue between investors and listed companies

3. Shorten stock settlement cycle & improve clearing services for better global competitiveness
   - Shorten stock settlement cycle to T+2
   - Boost activity in the ETF market via introduction of creation/redemption services
   - Refine margin rules and framework for listed derivatives and increase the use of clearing services

4. Create new communication channels with retail investors & enhance support for global investors
   - Improve marketing to attract more flow from retail investors and develop a new system for trading participants
   - Improve marketing and strengthen ties to attract more flow from global investors
   - Revamp outreach to global investors to attract more investment in Japanese equity

5. Improve rules for ETFs and promote them to boost activity & take steps for a market where anyone can invest with ease
   - Boost activity in the ETF market via updates of its Market Making Incentive Scheme and investor-directed promotion
   - Take steps for a market that facilitates trading for a wide-range of investors
   - Boost trading of Flexible Options and such non-flagship products as TSE Mothers Index Futures

6. Expand lineup of high-quality listed companies and products with high investment appeal
   - Attract a greater variety of enterprises to the market (focus on: startups at universities, regional banks as part of cooperative efforts, cross-border listings, and PRO-Market)
   - Create a greater variety of investible products (focus on: diversifying ETF pool and developing PRO-BOND, REIT, and infrastructure funds markets)

Primary Targets on Core Strategies

- Complete trading platforms for cash products in FY2019 and derivative products in FY2021
- Meet system requirements for trading platforms
- Shorten stock settlement cycle to T+2 in FY2019
- Approx. 100 IPOs/year
Launch and develop a comprehensive exchange

Evolve into a leading global derivatives market via early integration with Tokyo Commodity Exchange, generating a more vibrant market in Japan.

Initiatives

1. Expand into and develop a commodity derivatives market
   - Realize early integration with Tokyo Commodity Exchange
   - Take steps to attract global/retail investors after expansion into a commodity derivatives market

2. Adopt measures for clearing commodity derivatives to raise reliability
   - Build a commodity clearing scheme, develop and maintain systems pursuant to commodity clearing
   - Integrate with Japan Commodity Clearing House (JCCH)

3. Build surveillance & examination systems tailored to become a comprehensive exchange
   - Develop market surveillance and examination systems suitable for a comprehensive exchange
   - Offer support to potential trading participants, new partners, and stakeholders in establishing management systems

   - Drive initiatives in such areas as relationship building and R&D to evolve into an exchange where anyone can trade any product

Primary Targets on Core Strategies

- Achieve early integration with Total Commodity Exchange
- Achieve integration of clearing houses
- Raise trading volume by creating synergy
Diversify and propel data services into the next generation

Explore our new business models as an exchange by creating highly convenient data services emerging from an open and innovative framework.

**Initiatives**

1. Create new information services by utilizing innovation and partnerships
   - Create new services by setting up an open and innovative framework that enables startups to capitalize on data/information
   - Research investor needs and tailor data/information services to meet those needs

2. Build a next-generation system for disseminating information that employs API* & cloud
   - Build a next-generation system for disseminating information that incorporates the use of API and cloud computing
   - Tap into new user segments with diverse services generated from next-generation systems

3. Develop indices & enhance operations in response to needs & external changes
   - Strengthen ties and partnerships and leverage TSE brand in developing indices
   - Develop indices that reflect review of TSE’s market structure and new investment needs
   - Raise robustness and efficiency of operation of an index calculation system by improving IT infrastructure for calculating indices and for managing basic data

4. Realizing our medium- to long-term vision
   - Drive initiatives in such areas as relationship building and R&D to evolve into an exchange where anyone can trade in a secure and easy way

*API = Application Programming Interface.

**Primary Targets on Core Strategies**

- **Diversify channels incorporating API, etc. in FY2020**
- **Create 10 new services**
- **Attract 150 new clients**
Keep our market robust as a secure and reliable infrastructure through means such as developing and managing secure IT systems and enforcing appropriate self-regulations. Contribute to a sustainable society by raising financial literacy in an aged society, advocating for ESG investment.

Initiatives

1. Develop and manage IT systems that are secure and reliable for users
   - Launch a backup center and develop backup systems smoothly
   - Improve stability of market operations with higher quality BCP

2. Set up a backup center to improve reliability of the market in Japan
   - Promote the use of fintech in business
   - Adopt the most advanced technologies
   - Increase efficiency/sophistication of operations by replacing information systems and incorporating the latest technologies
   - Educate/train human resources on digitalization, etc.

3. Bolster system bases & develop highly-skilled personnel to turn IT into our source of competitiveness
   - Conduct listing examinations and monitor listed company compliance in ways that reflect external changes (such as a review of TSE’s market structure, new business models, approach to corporate governance)
   - Promote measures to enhance self-awareness at listed companies
   - Develop a new surveillance system employing advanced methods
   - Support trading participants in improving their compliance
   - Make relevant inspections to adapt to external changes, e.g. on management systems to deal with irregular trading

4. Exercise optimal self-regulation that adapts to external changes
   - Advance programs to increase retail investors (especially those with minimal interest in investment or no investment experience)
   - Drive efforts pursuant to educate on economics/finance and raise financial literacy in the age of the 100-year lifespan
   - Promote education on investment in derivatives

5. Support asset building for aged population & raise financial literacy among less-experienced investors
   - Instil TCFD** guidance and ESG investment, as well as deliver ESG training programs directed at listed companies and investors
   - Offer support in developing and promulgating ESG-related products (indices, ETFs, Green/Social bonds, infrastructure funds)

6. Promulgate ESG investment and promote sustainability to contribute to SDGs (Sustainable Development Goals*)
   - Develop human resources and advance work style reforms
   - Research global regulations, regimes, and competitiveness and take strategic steps
   - Improve R&D and information dissemination functions
   - Strengthen corporate communications, PR, and IR
   - Promote cooperation with foreign exchanges and support YSX
   - Make operations efficient and sophisticated

7. Strengthen business foundations

Primary Targets on Core Strategies

Launch Kansai backup center in phases starting in FY2021

Build industry-shared Blockchain/DLT* infrastructure in FY2021

Contribute to 10% yearly increase in installment type NISA & iDeCo users through raising financial literacy

* DLT = Distributed Ledger Technology

** A collection of 17 global goals set by the UNGA for the year of 2030
** Task Force on Climate-related Financial Disclosures set by Financial Stability Board
2. Strategies for Creating Value

Message from the CEO Financial Policies IT Master Plan Core Strategy

Special Feature 2

Special Feature 1

JPX Initiatives: Targeting Value Creation for Listed Companies

JPX’s vision of sustainable market development and the creation of an affluent society relies on two driving forces: listed companies creating medium- to long-term corporate value, and domestic and foreign investors participating actively and continuously in the market, making diverse investment decisions. From this viewpoint, JPX Group member Tokyo Stock Exchange is working to build a highly convenient, efficient and transparent market infrastructure, and to develop an environment which can support Japanese listed companies in their efforts to create corporate value. In FY2018, in addition to revising the Corporate Governance Code, TSE started to examine the ideal future structure of the cash equity market.

Enhancing the Effectiveness of Corporate Governance

For many years, TSE has been endeavoring to enhance corporate governance in Japanese listed companies, from the perspective of creating an environment in which diverse investors can invest in stocks with confidence, while such an environment is created through appropriate consideration of the rights of minority shareholders who acquire shares through the market.

Since JPX formulated the Corporate Governance Code (CG Code) jointly with the Financial Services Agency (FSA) in 2015, not only do 91.3% of 1st Section listed companies now have more than one independent outside director, we have seen a rise in the proportion of independent outside directors on boards every year so far, along with many other significant changes. However, for such initiatives aimed at enhancing the management supervisory function of listed companies to translate to successful medium- to long-term corporate value creation, we need to continue developing an environment that can support this.

To this end, TSE revised the CG Code in June 2018, taking into account the situation review and recommendations from the “Council of Experts Concerning the Follow-up of Japan’s Stewardship Code and Japan’s Corporate Governance Code” established jointly by TSE and the FSA. Listed companies were then given until December of the same year to disclose their “comply or explain” statements based on the revised CG Code. The principles added or clarified under this revision are: (1) management with an awareness of capital cost; (2) the use of independent nomination/compensation advisory committees and ensuring board diversity; and (3) reduction of strategic cross-shareholdings based on assessments of capital cost. Each of these principles is expected to enhance the framework’s effectiveness in supporting medium- to long-term corporate value creation at listed companies. TSE will continue to follow up on the progress of efforts on the revised CG Code, and will also continue to work on the necessary development of the market environment.

Constructive Dialogue between Companies and Investors
Cash Equity Market Structure Review

TSE has actively contributed to the sustainable growth of Japan’s industry and economy through the smooth supply of risk money in the cash equity market, and from this perspective, has provided listing opportunities to a wide range of companies. To create an environment conducive to investment, the market is divided into segments according to the characteristics of those companies.

In the cash equity market aimed at all investors, we currently have four market segments in place: First Section, Second Section, Mothers, and JASDAQ. These market segments were created when the Tokyo and Osaka stock exchanges combined in January 2013, and integrated their cash equity markets at TSE in July of the same year. When creating standards for each market segment, to avoid any confusion among listed companies and companies preparing to list as well as their shareholders and investors, we took the decision to maintain in principle the listing rules of the two exchanges as they were.

However, from the perspective of TSE’s role in contributing to the sustainable growth of the Japanese economy through the management of the cash equity market, TSE needs to continue to provide listing opportunities for a wide range of companies, and incentivize medium- to long-term corporate value creation after listing. To achieve this, and gain greater support from diverse investors at home and abroad, there is a need to take appropriate measures to solve problems in the market structure.

With this in mind, in the fall of 2018, TSE began to review concrete options for how the cash equity market should be structured in the future. In December 2018, TSE announced the main points that had arisen from the review, carried out a broad public consultation and conducted interviews. In March 2019, the main issues and areas for improvement based on the comments received were collated and published along with said comments in the “Comments Received from Market Participants in Response to the Review of the TSE Cash Equity Market Structure”.

Discussions on the cash equity market structure are now being conducted by the FSA’s Financial System Council under the Working Group on Market Structure. Taking these into account, TSE will continue to endeavor to create listing rules and a cash equity market structure which fits with changes in the market environment for companies and investors.

Current Issues Regarding TSE Cash Equity Market Structure

1. No functioning benchmark
2. Segment concepts unclear
3. Insufficient incentives for sustainable growth
4. Segment concepts unclear
5. The structure does not fully fulfil its expected role in providing incentives for listed companies to sustainably increase corporate value
6. There is no index functioning properly as an investable benchmark of the market
Self-regulatory Functions Required for JPX Value Creation

In ensuring that Tokyo Stock Exchange and Osaka Exchange continue to be trusted by everyone and remain places where trading can take place safely and securely, Japan Exchange Regulation (JPX-R) plays an important role as what could be termed the quality control center of the exchanges. Its roles include listing examinations, which involve examining the eligibility of companies wishing to list; listed company compliance, the checking of information disclosure and the business behavior of listed companies; market surveillance and compliance, monitoring the market for unfair trading; and trading participants’ examination and inspection to ensure the credibility of trading participants’ operations.

In recent years, the environment surrounding market transactions has been changing very rapidly, and the speed of that change has been increasing year by year. We aim to ensure market fairness and reliability by applying an appropriate self-regulatory function to everyday capital market activity.

Application of Artificial Intelligence to Market Surveillance and Compliance Operations

In order to address the increase in high-frequency trading (HFT) in equities and other asset classes, and the consequent drastic increase in the number of trading orders, JPX-R had to improve the market surveillance function to protect the fairness and reliability of the markets. From this viewpoint, we introduced artificial intelligence (AI) technology to the cash equity market surveillance and compliance operations in March 2018. Since then, we have been working to improve the accuracy of AI through, for example, ongoing verifications of the calculation results obtained by AI and the introduction of new models.

The AI we use is taught the knowledge of surveillance personnel for preliminary evaluations of unnatural trading execution patterns. By utilizing this AI in market surveillance and compliance operations, surveillance personnel can expedite the preliminary investigation process, and this allows them to focus on detailed, full-scale investigations. In this way, AI has enabled more detailed and in-depth market surveillance.

Response to Introduction of Registration System for High-Frequency Traders

Recently, in response to the increasing influence of HFT in equities and other asset classes, the revision of the Financial Instruments and Exchange Law in 2018 newly introduced a registration system for HFT practitioners. In response to this, we added a provision that requires HFT practitioners to submit some necessary documents and explain the details of a trade when considered necessary for market surveillance and compliance. In addition, we carried out functional improvements to the market surveillance and compliance system to apply the HFT strategy trade flags and other functions that are now required for disclosure of HFT activity. This has enabled us to identify investors who engage in HFT activities and to ascertain the status of their trading more quickly and efficiently.

In addition, as well as adding “Management Systems pertaining to High-Frequency Trading” to our focus areas for inspections from FY2018, we are also conducting confirmations of the maintenance of management systems, etc. at trading participants who receive HFT client orders, and at trading participants who engage in HFT on their own account.
Identifying Problems on the Front Line of Trading Participants’ Trade Management

To ensure the fairness and reliability of the market, it is essential for trading participants, acting as gatekeepers of access to the market, to carry out highly effective trading management.

JPX-R visited many trading participants individually to exchange views on the current situation on the front line of trade management. We then summarized the common issues that were brought up, and communicated these to all trading participants, with the purpose of having each company confirm the condition of their trading management systems.

Activities Designed to Spread and Embed "Principles for Preventing Corporate Scandals"

Following the many scandals that have come to light at listed companies in recent years, such as fraudulent accounting and the falsification of product performance, to ensure the credibility of the capital markets, we formulated behavioral standards called the “Principles for Preventing Corporate Scandals” in March 2018. We hope that this will enhance the effectiveness of preventative measures against scandals at listed companies, and circumvent the loss of corporate value.

To support the spread of the Principles and the specific efforts made at listed companies, we spoke at external seminars and contributed articles to specialist journals, while also holding seminars for executives who are in a position to encourage anti-corruption efforts. In addition, we have added the content of the Principles to the e-learning content that executives of companies intending to list are required to study prior to listing.

It is hoped that these efforts will raise awareness of the need to prevent scandals at listed companies, and that efforts to prevent misconduct will be introduced and improved.

Message from the President

As part of JPX Group, Japan Exchange Regulation (JPX-R) strives on a daily basis to maintain and control the quality of the exchange market, which in turn guarantees the market’s fairness and reliability. This includes maintaining the eligibility of listed companies, preventing unfair trading in the market, and maintaining the soundness of trading participants such as securities companies. Positioned as a fundamental function of the market operator, JPX-R plays an important role in creating corporate value for JPX.

To properly carry out its self-regulatory operations, it is essential that JPX-R has an organizational system that can maintain a high degree of autonomy and can be managed and administered from a neutral standpoint. Also needed are high levels of expertise to fully understand the functions and characteristics of the market so that appropriate responses can be made to events that occur on a daily basis. It is also crucial to exert appropriate self-regulatory functions in line with environmental changes, amidst the progress being made in the market structure reform, the emergence of new business models, and corporate governance reform.

Under these circumstances, despite being part of JPX Group, JPX-R also specializes in self-regulation operations as a separate entity from JPX the exchange operator. The Board of Governors, the highest decision-making body in JPX-R’s business operations, is composed of a majority of Outside Governors, and this independent governance system functions in decision making. We also listen to a wide range of opinions from outside experts: as an advisory body to the Board of Governors, we have established a Disciplinary Committee to deliberate on the details of disciplinary action against trading participants. Through the establishment of such systems, we demonstrate a high level of expertise while carrying out highly effective self-regulatory operations from a neutral position that is independent from the exchange.
3. The Foundations of Value Creation

The foundations of JPX’s corporate value creation lie in two places: establishing appropriate corporate governance, and, through dialogue, meeting the expectations of a wide range of stakeholders such as listed companies, trading participants such as securities companies, investors and other related organizations. While continuously striving to improve corporate governance so that it functions more effectively, we proactively seek dialogues with each stakeholder, and engage in various activities in our role as a member of society, beginning with the operation of our market.
Aiming to Realize an Affluent Society

At the UN Sustainable Development Summit in 2015, 17 Sustainable Development Goals (SDGs)—international goals related to the economy, society, and environment—were adopted as a step towards realizing a society that is sustainable, diverse, and inclusive.

JPX’s corporate philosophy is to contribute to the realization of an affluent society by promoting the sustainable growth of the market and, by extension, realizing the society envisioned in the SDGs. Under this corporate philosophy and as a member of society, JPX will continue to regularly hold dialogues with a wide range of stakeholders, including listed companies, trading participants such as securities companies, investors, and other related organizations, and aim to contribute to the realization of an affluent society.
Corporate Governance

JPX is committed to developing its corporate governance system in the most suitable way for fulfilling its social mission as the core infrastructure of the Japanese market.

Fundamental Views

In order to conduct management in line with its corporate philosophy (page 2), JPX is aware of the importance of having its stakeholders understand its corporate philosophy and corporate activities. Therefore, JPX has established fundamental views on corporate governance from the following four perspectives.

Based on these fundamental views, JPX is committed to appropriately developing its corporate governance system in light of the intent of the individual principles of Japan’s Corporate Governance Code.

Corporate Governance System

JPX clearly segregates the management oversight and business execution functions and adopts the structure of a company with three committees (nomination, audit and compensation) to strengthen oversight and raise the transparency of management.

Corporate Governance System Diagram

Corporate Governance

JPX Group operates markets that are a public asset and fulfills its social mission by pursuing the sustainable development of its markets.

Enhanced Corporate Value

In pursuing the sustainable development of its markets, JPX must continue to accommodate the diverse needs of shareholders and other stakeholders, and through this JPX will enhance its corporate value over the medium- to long-term.

Effective Corporate Governance

JPX strives to constantly improve its corporate governance system to further facilitate effective and useful systems, so as to support the sustainable development of its markets.

Corporate Philosophy and Social Mission

JPX Group operates markets with the view that garnering support for and fostering confidence in the markets it establishes are in the common interest of all investors and market users, and that maintaining and enhancing such support and confidence will build the foundations for sustainable development of its markets.

Market Operations

JPX Group operates markets with the view that garnering support for and fostering confidence in the markets it establishes are in the common interest of all investors and market users, and that maintaining and enhancing such support and confidence will build the foundations for sustainable development of its markets.

Corporate Governance System Diagram

General Shareholders Meeting

Board of Directors

CEO

Nomination Committee

Comprised of 5 directors, including 4 outside directors

Decides on proposals regarding the appointment and removal of directors to be submitted at general shareholders meetings, etc.

Compensation Committee

Comprised of 5 directors, including 3 outside directors

Determines the compensation, etc. of each director and executive officer

Audit Committee

Comprised of 5 directors, including 4 outside directors

Conducts audit on the execution of director and executive officer duties, prepares audit reports, and decides on proposals regarding the election and dismissal of the accounting auditor, as well as the disengagement of the accounting auditor

Risk Policy Committee

Comprised of 5 members, including 3 outside directors and 1 executive officer

Discusses important matters regarding aspects including business strategy, management, and finances concerning the corporate group

Board of Executive Officers

Internal Auditing Office

Audit Committee Office

Comprised of dedicated staff to support members of the Audit Committee and performs work related to the committee
Composition of the Board of Directors

The JPX Board of Directors is comprised of 14 members, including two women. To strengthen the board’s functions, namely increasing the transparency and accountability of management and supervising the appropriateness of business execution, the composition of the board includes nine independent outside directors, constituting a board majority, and an independent outside director as non-executive Chairperson.

The breakdown of the nine independent outside directors is as follows: three corporate managers, one legal professional, one certified public accountant, and four academics or former government officials. Each of them has considerable experience and insight in his/her respective field and contributes to a structure that allows for multi-faceted external perspectives to be readily incorporated into the management of JPX.

Nomination, Compensation, and Audit Committees

As required by law, JPX has a Nomination Committee and a Compensation Committee for the purpose of ensuring transparency and objectivity in the appointment/removal and compensation of directors and executive officers. Outside directors are in the majority in both these committees. The appointment and removal of directors and executive officers are thoroughly deliberated and determined by the Nomination Committee and put forth for approval at general shareholders meetings, and the compensation of directors and executive officers is determined by the Compensation Committee.

JPX also has an Audit Committee, as required by law, to perform the audit function. This committee is made up of five directors (including one full-time Audit Committee member), of which four, including a certified public accountant, are independent outside directors. JPX also has an Audit Committee Office to assist the committee members in the performance of their duties.

Risk Policy Committee

JPX has a Risk Policy Committee with the aim of further improving its corporate governance. The role of the committee, which consists mainly of outside directors, is to bring an outside perspective to risk management.

For further information on JPX's risk management systems, including information on the content of activities of the Risk Policy Committee, please refer to page 32.

Evaluating the Effectiveness of the Board of Directors

At JPX, the Board of Directors analyzes and assesses its own effectiveness based on interviews with and surveys completed by all board members. The Independent Outside Directors Committee is tasked to conduct the evaluation to increase the objectivity and transparency of the evaluation process.

For information on the evaluation process, an overview of evaluation results and other related matters, please refer to the Company's Corporate Governance Report.

Remuneration is comprised of (1) basic salary, (2) bonuses, and (3) JPX stock. The policies, etc. regarding decisions on each type of compensation are as follows.

(1) **Basic salary** Basic salary is determined in accordance with each executive’s position and duties as consideration for their everyday execution of duties and participation in management, and with reference to the level of executive remuneration at other companies, based on research by external expert organizations and other sources.

(2) **Annual incentive (bonus)** An annual incentive (bonus) is paid to Executive Officers using net income (refers to net income attributable to owners of the parent company on the consolidated statement of income, hereinafter the same) as the indicator. Net income is used as the indicator for two major reasons: first, because it is a source of funds for dividends to shareholders and for investment aimed at corporate value creation, and second, because the bonus corresponds to each fiscal year, and it is therefore appropriate to base it on net income earned in the corresponding fiscal year. Specifically, the annual incentive primarily consists of an amount proportional to net income and an amount based on net income’s rate of change from the preceding fiscal year.

(3) **Medium-to long-term incentive (stock remuneration)**

The medium-to long-term incentive (stock remuneration) is paid to Executive Officers with the aim of aligning the interests of executives closer to those of shareholders, providing motivation for corporate value creation over the medium to long term, and strengthening the link between performance and compensation. JPX stock remuneration utilizes a share delivery trust framework and is comprised of a fixed amount and a performance-linked amount.

For the fixed amount, executives are issued points every fiscal year according to their position, etc., and are awarded stocks corresponding to these points three years later.

For the performance-linked amount, all executives are given performance-linked base points each fiscal year. Three years later, stocks are awarded corresponding to the final tally of performance-linked points, which is calculated by multiplying the performance-linked base points with a coefficient based on the degree of achievement of certain performance conditions. The above-mentioned co-efficient is set within a 0–150% range, based on the following conditions: (i) the Company’s consolidated ROE exactly three years from the issuance date of the performance-linked base points and (ii) a comparative assessment of Total Shareholder Return (TSR) and the performance of the JPX-Nikkei Index 400 (total return index) for the three-year period from the end of the fiscal year before the performance-linked base points were issued. Consolidated ROE is used as an indicator from the perspective of improving capital efficiency, while TSR is used from the perspective of improving value for shareholders.

With a view to the success of JPX Group’s 3rd Medium-Term Management Plan, launched in FY2019, the Compensation Committee, which was convened on March 26 and April 19, 2019, has implemented a review of performance-linked remuneration for Executive Officers. Specifically, the committee’s measures include integrating the annual incentive (bonus) linked to net income’s rate of change from the preceding fiscal year into the amount that is proportional to net income. The new rules will apply from FY2019.

### Compensation Paid to Directors and Executive Officers

Notes:
1. Four Directors serving concurrently as Executive Officers do not receive compensation as Directors and are therefore not included in the number of recipients. Furthermore, one Executive Officer serving concurrently as Director of Tokyo Stock Exchange, Inc., one Executive Officer serving concurrently as Director of Osaka Exchange, Inc., and one Executive Officer serving concurrently as Director of Japan Securities Clearing Corporation do not receive compensation as Executive Officers and are therefore not included in the number of recipients.
2. The amount of basic salary awarded in accordance with position and duties of each executive in consideration of their everyday execution of duties and management participation, (2) An amount of JPY 128 million in annual incentive (bonus) for Executive Officers determined at the Compensation Committee meeting held on April 19, 2019, (3) An amount of JPY 95 million in medium- to long-term incentive (stock remuneration) for Executive Officers recorded as expenses in the fiscal year under review.
Risk Management

In its approach to risk management, JPX recognizes the importance of maintaining sound and stable business operations to fulfill its public role and continue raising corporate value.

Risk Management Systems

JPX faces numerous risks in the course of its operations, including risks associated with system glitches, legal matters, compensation in the event of clearing participant defaults, and administrative errors. JPX has established a Risk Policy Committee, chaired by the CEO, and Risk Management Committee, chaired by an outside director, to address risk. In line with JPX’s Risk Management Policy, these committees are responsible for identifying risks as well as developing and implementing measures to prevent such risks. JPX also has a system in place to ensure a swift and appropriate response when risks do or are likely to materialize.

The Risk Policy Committee consists of at least five members, the majority of whom are outside directors. As a rule, the committee is chaired by an outside director. The Risk Management Committee is composed of core members and project members who oversee the risks of specific projects. The CEO (who serves as chairperson), the Executive Officer overseeing the General Administration Department, and the director of the department make up the core members, while the chairperson of the committee assigns project members to specific cases as they arise.

The Risk Management Policy serves to prevent risks by indicating and classifying the risks JPX faces. Departments or sections are assigned to handle the classified risks, and information on the assessments of operations and issues to be addressed are periodically brought before the Risk Policy Committee and Risk Management Committee.

Each fiscal year, the Risk Policy Committee identifies the significant risks requiring priority action in JPX. The results of this process are submitted to the Board of Directors as recommendations in the form of a Comprehensive Risk Management Statement. JPX works to reduce the possibility of realization of the risks based on the Comprehensive Risk Management Statement and responds flexibly to risks that materialize. When a major issue occurs, the Risk Management Committee gains an overall grasp of the situation and orchestrates a concerted response by giving directions for dealing with the issues as quickly as possible. The system calls for all necessary information to be reported to management promptly and without fail.

In its approach to risk management, JPX recognizes the importance of maintaining sound and stable business operations to fulfill its public role and continue raising corporate value.

Risk Management Systems

The Risk Management Policy serves to prevent risks by indicating and classifying the risks JPX faces. Departments or sections are assigned to handle the classified risks, and information on the assessments of operations and issues to be addressed are periodically brought before the Risk Policy Committee and Risk Management Committee.

Each fiscal year, the Risk Policy Committee identifies the significant risks requiring priority action in JPX. The results of this process are submitted to the Board of Directors as recommendations in the form of a Comprehensive Risk Management Statement. JPX works to reduce the possibility of realization of the risks based on the Comprehensive Risk Management Statement and responds flexibly to risks that materialize. ### Risk Classification

<table>
<thead>
<tr>
<th>Types of Risk</th>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>Business environment and business strategy risk</td>
<td>Economic fluctuations, legal and regulatory matters, demographic changes, technological innovation, investor trends, public opinion, and errors in judgment on business choices</td>
</tr>
<tr>
<td>Accidents and disaster risk</td>
<td>Major earthquakes, typhoons, tsunami, epidemics, terrorism, failure/stoppage of social infrastructure, fires, and accidents</td>
</tr>
<tr>
<td>System risk</td>
<td>Inadequate hardware capacity and application errors</td>
</tr>
<tr>
<td>Legal risk</td>
<td>Violations of laws and regulations in the course of business, business partner’s failure to perform on contracts, and the possibilities of having a relationship with anti-social forces</td>
</tr>
<tr>
<td>Financial risk</td>
<td>Jeopardized reliability of financial reporting, lack of funds, and loss or damage to assets, including deposits</td>
</tr>
<tr>
<td>Human risk</td>
<td>Personnel shortage, industrial accidents, and occupational hazards</td>
</tr>
<tr>
<td>Information security risk</td>
<td>Information leakage, unauthorized access, and computer viruses</td>
</tr>
<tr>
<td>Operational risk</td>
<td>Mistakes in operational procedures and misjudgments</td>
</tr>
<tr>
<td>Risk of associated companies</td>
<td>Emergence of risk in group companies</td>
</tr>
<tr>
<td>Reputational risk</td>
<td>Decline in public reputation due to acts and statements by employees and/or third parties</td>
</tr>
<tr>
<td>Credit risk and liquidity risk arising from obligation assumption business</td>
<td>Emergence of losses due to default, etc. by clearing participants</td>
</tr>
<tr>
<td>Other risks</td>
<td>Risks other than those mentioned above</td>
</tr>
</tbody>
</table>

### Significant Risks

Each fiscal year, we identify the significant risks that could affect JPX. We control the possibility of the materialization of these risks by implementing the necessary preventive measures. We also implement measures to ensure that we are able to respond flexibly in the event that risks materialize.

JPX approaches risk management on two levels.

First, all group companies work to identify risks in the internal environment.

Second, there is wide-ranging discussion involving the management team about potential risk factors in the external environment, including geopolitical risk. Based on the results of these discussions, we then examine significant risks.

Many risks are detected at the discussion stage. We examine these in detail to identify the risks that require the greatest attention in each fiscal year, on the basis of the potential impact on JPX if the risk materializes and the frequency with which such risks are likely to arise.

We then take preventive measures targeting specific significant risks.

### Significant Risks

<table>
<thead>
<tr>
<th>Risk Phenomena</th>
<th>Risk Scenarios</th>
</tr>
</thead>
</table>
| Risks that could impact JPX business continuity and business operations | • Risk to business continuity resulting from damage to social infrastructure, including power grid failure, such as in the event of a wide-area disaster  
  • Risk that could affect market operations, etc. due to cyberattacks on JPX’s systems  
  • Risk to trading continuity due to pressure on system capacity caused by abnormal market fluctuations in response to sudden short-term exchange rate movements caused by economic or political events in Japan or overseas |
| Risks that could affect JPX business performance and financial position | • Risk of a decline in trading due to medium- to long-term market stagnation resulting from changes in political and economic conditions in the U.S., the EU, or other major economies  
  • Risk that the financial position of JPX will be impacted by a clearing participant default |
In recent years, with faster systems and the growing prevalence of co-location services, there has been an increase in the number of orders processed by JPX trading systems. In view of these changes, JPX is monitoring market trends and system usage and working to manage the system capacity of JPX as a whole by utilizing projections to prepare for and prevent any system capacity issues that may arise.

Capacity management is not conducted by IT divisions alone, but also by the Capacity Management Committee with the CIO as chairperson. The cross-divisional committee is made up of executive officers and departments involved in market operations. Geared toward realizing even better systems, the committee monitors, analyzes, and assesses system operation conditions, works on improvements for current systems, and provides feedback on the design and development of next-generation systems. The committee employs the PDCA management cycle in its activities, while reporting to management periodically and on an as-needed basis to make swift and appropriate decisions on priority or emergency issues related to system capacity.

JPX’s core responsibility as a market operator within the social infrastructure is to provide reliable markets for market users to trade with confidence. Therefore, even when major risks do materialize, such as in the form of natural disasters or terrorist acts, JPX must be prepared to answer the call of society and continue operations. To be ready for such situations, JPX established its Business Continuity Plan (BCP) to define its response to materialized risks.

The basic concept of the BCP is to continue operations as far as possible even in times of emergency. If suspension is unavoidable, then the affected operations should be resumed as soon as possible. For instance, even if a serious incident, such as a major earthquake, occurs and operations are suspended, in principle, JPX aims to resume clearing operations in about two hours and trading operations within 24 hours to prevent the loss of a trading day to the greatest extent possible.

To achieve said targets, in addition to its primary data center where operations normally take place, JPX also maintains a secondary (back-up) center, which is located in a different area to avoid having both centers be simultaneously affected. If the primary center is affected by a disaster and cannot continue operations, operations are switched over to trading and other core systems in the backup center to allow trading to resume as quickly as possible. Furthermore, in a bid to help further enhance the reliability of the Japanese market, the decision was made to construct a new secondary (back-up) center in a remote area of the Kansai region, where in the case of a disaster such as a major large-scale earthquake in the Tokyo Metropolitan area, there would be little or no fear of damage to societal infrastructure causing a shortage of essential services such as electricity. The new secondary (back-up) center is scheduled to come online progressively from FY2021.

Furthermore, in preparation for a large-scale earthquake and other wide-area disasters, the core telecommunications network, arrownet, is designed as an optical ring network that surrounds the Tokyo metropolitan area. Even if a part of the network is severed by a disaster, transmissions will be re-routed immediately, ensuring that connections are maintained. The BCP also defines the response policy for each type of identified risk, as well as detailed plans for establishing the BCP emergency headquarters and securing personnel and communication methods. JPX reviews its BCP at least once a year and revises it accordingly in light of changes in the environment.

[WEB] Business Continuity Plan
Contingency Plan

Alongside the need for exchanges to provide opportunities for trading, in order to maintain fair price formation in the market, it is also necessary for securities companies and other market participants who place orders to the exchange market to maintain a certain level of preparedness. JPX formulates contingency plans for disseminating and publishing its basic response policies when it becomes difficult to continue trading, such as when there is a glitch in a JPX or external system, a natural disaster or terrorist act, or when parts of the social infrastructure cease to function. For example, when trading participants that account for approximately 50% or more of securities trading can no longer participate in the market, the policy is to decide whether to suspend trading after comprehensively considering the impact on liquidity and fair and reliable price formation.
Internal Control Systems and Compliance

Besides maintaining well-designed business operating systems for stable and appropriate execution of business, all officers and employees observe laws and regulations and demonstrate a strong sense of ethics in the performance of their daily tasks.

Internal Control Systems

JPX has a Basic Policy on Establishment of Internal Control System and develops internal control systems based on this policy. To ensure the proper operation of business processes throughout the corporation, JPX creates systems for ensuring compliance with laws and regulations, safeguarding and managing information, managing risk of loss, ensuring efficient operations, and for internal controls. To ensure that these systems are functioning properly, the Internal Auditing Office, an independent unit that reports directly to the CEO, periodically confirms and assesses the status of internal controls.

WEB Basic Policy on Establishment of Internal Control System
https://www.jpx.co.jp/english/corporate/governance/internal-control/index.html

Compliance Program

JPX has a Charter of Corporate Behavior in place as a set of standards for ethics and morals, which clearly states the expected corporate behavior. In order to ensure the effectiveness of internal controls, JPX continues to increase awareness of compliance among management and employees by continually renewing internal systems, as well as through education and training.

WEB Compliance Program
https://www.jpx.co.jp/english/corporate/governance/compliance/index.html

Charter of Corporate Behavior

The Charter of Corporate Behavior serves to make clear JPX’s social responsibilities as an open and transparent corporation positioned in harmony with society. The Charter states the basic policies for corporate behavior in terms of ethics and morals. It also clearly indicates JPX’s investor-centric stance and reflects our commitment to being an open company.

Organizational System

The CEO assumes responsibility for compliance and oversees all compliance-related matters. The CEO is assisted by the officer responsible for compliance and the Compliance Secretariat. JPX has a Compliance Hotline in place to provide a channel for reporting information and making inquiries regarding clear or suspected violations of laws and internal rules, including against the Charter of Corporate Behavior. When certain behavior involving JPX officers or employees is suspected to be in violation of compliance, the hotline makes it possible to detect such acts promptly from an incoming call and introduce measures and frameworks to address them.

Activities for Continued Awareness

JPX engages in a number of activities to maintain awareness of compliance issues. These include cross-divisional meetings among all staff in charge of compliance matters, distributing compliance handbooks, communicating knowledge on compliance through the intranet, and holding e-learning courses.

I was conscious that deliberations should be centered around the future and in particular the three-year period beyond the current Medium-Term Management Plan.

**The Board of Directors**

**Q. What are your thoughts about the current Board of Directors?**

Nine of the 14 members of JPX’s Board of Directors are independent outside directors. Among those members, there are corporate managers, legal experts, public accountants, researchers, ex-government officials and others. Moreover, this includes two female members, one of whom is a foreign national. This makes for a diverse Board of Directors, and I believe it is a structure which allows varied expert opinions to be easily reflected in management.

In addition, every year we conduct interviews and surveys of all directors to evaluate the effectiveness of the Board, and we make improvements based on the results of those evaluations. We think that the effectiveness of the Board of Directors is improving every year due to this method.

**Q. What are your main areas of focus when conducting Board of Directors’ operations?**

When only company insiders are involved, opinions tend to converge, so having outside directors add their differing perspectives and arguments to discussions generates a good sense of tension within the Board. Personally I feel that the Board of Directors should be a venue for constructive dialogue by a membership that is rich in diversity, so I focus on leading discussions in a way that enables each person to actively participate. At times I also encourage other members to speak. I believe that proactively incorporating diverse opinions and proposals will help governance at JPX to evolve.

Moreover, if a discussion has not reached a mature stage, we will carry it over to the next meeting, rather than cutting it off prematurely. This way, even if opinions differ during a discussion, we can make sure that everyone can consent to the final conclusions.
The 3rd Medium-Term Management Plan

Q. How do you view the formulation process for the 3rd Medium-Term Management Plan that was announced in March of this year?

Developing a management plan is one of the Board of Directors’ most important roles.

Deliberations on the general direction of the 3rd Medium-Term Management Plan began last summer, and building on those, robust discussions were held over eight months including eight meetings of the Board of Directors, leading up to the Plan’s unveiling in March. The deliberations focused not just on the three year period that the plan covers, but also further into the future, with consideration of course to the pursuit of profit, but in the context that profit is an end result rather than an objective, as stated in our Articles of Incorporation. Discussions started with an analysis of the current environment surrounding JPX, and then moved on to concrete conclusions about what JPX can contribute towards the creation of an affluent society. We believe that the fact that these conclusions are reflected throughout the Medium-Term Management Plan is proof that the Board of Directors’ functions worked in the way they should have.

Q. What kind of points did you struggle with in moving discussions forward?

At JPX’s Board of Directors, both internal and external members routinely have free-spirited and vigorous discussions. As a result, it took blood, sweat and tears to work out how to bring everyone to a consensus. I do think that this is evidence that the Board of Directors is functioning as it should, but from the management execution side, it must have been difficult to respond to such a variety of opinions.

Q. What impressions were you left with from discussions on the Medium-Term Management Plan at the Board of Directors?

My first impression was how much the directors are deeply mindful of stakeholders. At the early stages of Medium-Term Management Plan discussions, one director actually expressed a wish to check what kind of opinions had been received from stakeholders. Moreover, there were differing opinions even on the specific wording which had been selected to be written on the materials, and earnest discussions were held on the best way to phrase things to make sure the Plan could be easily understood.

Secondly, I was struck by the keen awareness that all the directors have on how JPX must be a role model for corporate governance, in its position as parent company of the Tokyo Stock Exchange, which formulates the Corporate Governance Code.

Q. What are your expectations for JPX going forward?

The social and economic environment surrounding JPX is facing significant structural changes. Outside Japan, uncertainties are rising with the increasing shift toward protectionism and partisan politics, while inside Japan, the declining birthrate and aging population means that stable asset building for retirement is becoming an urgent issue. In addition, striking developments are being carried out in new technologies, led by fintech. I am expecting JPX to create value in this environment through the solid implementation of “Sail to the future, Keep the market secure”, our 3rd Medium-Term Management Plan strategy. To that end, I would like the Board of Directors to continue to sufficiently deliberate on the progress of the Medium-Term Management Plan in order to fulfil its functions of directing and overseeing management.

Our view of ideal governance is something that changes in line with the times and demands of society. As the parent company of the Tokyo Stock Exchange, which formulates the Corporate Governance Code, I would like the Company to adapt to the environment and endeavor to make it so that we can go forward with a governance framework to be proud of.
3. The Foundations of Value Creation >> Initiatives for Realizing an Affluent Society

> Financial Education

Financial Education

Role of Financial Education

Japan is facing problems arising from a shrinking workforce and limitations on its social security system. Therefore, the major task at hand for Japan is figuring out how to use its assets as efficiently as possible to generate economic growth for the next generation. JPX believes it can help to address these issues by raising the financial literacy of each and every member of our society and by pushing for a shift from savings to investment. To this end, JPX implements various initiatives.

In Japan, households have ample monetary assets, totaling more than JPY 1.8 quadrillion; however, these assets are still not being fully utilized. The statistics of the composition of Japanese household assets show that cash and deposits account for a substantial 54% of the total, while stocks and other investments account for only 13%.

If even a portion of the household cash and deposits that account for over half of household assets were to be invested in publicly traded companies, companies could expand their businesses and provide new products and services, resulting in additional employment and increased wages. We, thus, need to create a virtuous cycle in the Japanese economy by promoting the shift from savings to investment.

At the same time, there is no guarantee that the existing social security system will be able to continue providing sufficient financial resources for the elderly after retirement amid the major changes that arise, such as the social security system being reviewed due to low birthrates and the aging population. Each and every one of us must proactively build assets in a manner suited to our life cycles.

For this reason, JPX offers various educational programs that provide practical information on what to invest in and how to invest to people of all ages from elementary school to adults with different investment experience, including those new to investing. These programs serve as an opportunity to think about investment and motivate participants to start investing. JPX contributes to the development of the Japanese economy by providing more people with the information necessary to participate in the financial market, thereby accelerating the shift from savings to investment.

Driving the Economic Growth Cycle through Asset Utilization

Initiatives to Encourage Participation in the Market

Highlighting the significance of investment and offering information to increase knowledge of investment
Outreach to Schools
( Elementary through High School)

Although our daily lives are closely related to the economy and stock companies, there are very few opportunities to learn about these topics in school. To remedy this situation, JPX sends staff to speak during politics and economics or civics classes at schools. They give lectures on how stock companies work and mix some role-play and skits to help students familiarize with finance and economics. During FY2018, JPX held over 110 lectures, reaching out to approximately 3,800 students in total.

These lectures are also given at TSE and OSE along with tours of the facilities to let students experience the dynamism of economics on-site. In FY2018, TSE welcomed a cumulative total of 9,700 students for 470 lectures.

Economics Lectures for Parents and Children
(Elementary and Junior High School Students)

JPX holds many events, mostly during summer vacation, for elementary and junior high school students and their families to familiarize with finance and economics. In FY2018, a total of approximately 1,600 persons participated in these events.

OSE held a program called "Learning with Children - Finance and Stocks Summer School", for fourth to sixth grade students in collaboration with the Osaka prefectural government's finance and public relations committee, Japan Securities Dealers Association, and other organizations. The students heard explanations from on-site staff as they visited key facilities in the Osaka financial and economic community.

Lectures for University Students

JPX offers lectures at universities nationwide to substantially deepen the understanding of finance, economics, and securities markets among college students who will soon be deeply involved in the Japanese economy. Students also have the opportunity to visit TSE and OSE to gain firsthand experience and attend lectures. In FY2018, more than 190 lectures were held as part of this program, attracting a cumulative total of approximately 7,500 attendees.

To help nurture the next generation of leaders, JPX holds sponsored courses at Keio University and joint courses at Sophia University and Yokohama National University. Lectures cover the latest developments in law, economics, management and accounting related to the securities market, along with the roles expected of listed companies.

In addition, JPX has also sent staff to Kansai University to give lectures on the basic mechanisms and roles of derivative products. JPX is also prioritizing lectures at major universities with a focus on life planning and asset building.
JPX Entrepreneur Experience Program

The JPX Entrepreneur Experience Program aims to give students the experience of running and managing a simulated start-up stock company that operates a bazaar stall. This entrepreneur education program involves events for participants to learn and gain the ability to think on their own initiative and, thereby, contribute to the development of more well-rounded individuals. JPX collaborates with schools and regional communities as part of JPX's activities to support financial literacy; and, in FY2018, the program reached 13 locations across Japan and drew about 1,300 participants.

In FY2015 and FY2016, as a result of this initiative, JPX received an honorable mention award from the judges of a program sponsored by the Ministry of Education, Culture, Sports, Science and Technology that recognizes companies that offer superior hands-on experience activities for young people.

Economics Lectures for School Teachers

JPX provides seminars for junior high and high school teachers mainly during summer vacation, aiming at equipping teachers with knowledge and ways of thinking that will support them in holding classes for students. In FY2018, JPX held the Summer Vacation Economics Course for Teachers and the Winter Vacation Economics Seminar for Teachers, which were attended by a cumulative total of around 970 teachers over nine days. JPX also sends staff to speak at training and study sessions for teachers.

JPX Academy

Knowledge of “finance and economics” and “asset building” is important for everyone, and there is a growing need to increase opportunities for people of all generations to learn about them.

JPX Academy offers information from a neutral point of view on financial products such as stocks, exchange traded funds (ETFs), and derivatives, as well as macroeconomic trends, the latest economic theories, and other subjects relevant to asset building and management. In FY2018, a cumulative total of over 10,500 persons participated in JPX Academy programs.

Joint Projects with Securities Industry Groups

JPX collaborates with securities industry groups and organizations to offer programs to disseminate information and forge a deeper understanding of securities. In particular, JPX offers simulated stock investment programs for students from junior high schools to universities to help them learn about the relationship between stock price fluctuations and economic phenomena. A cumulative total of nearly 42,200 students from 810 schools have participated in these programs in FY2018.
+YOU Japanese Economy Support Project

TSE has been involved in the “+YOU Japanese Economy Support Project” since FY2012 under the slogan of “imparting new energy upon Japan through the securities market”. The objective of this project is to inform as many people as possible of the true meaning and dynamics of securities investment. To achieve this objective, the project introduces the appeal of investment to those who have no interest in economics or investment.

In FY2018, JPX held 28 seminars, in which a cumulative total of approximately 3,000 individuals participated.

Lecturer Dispatch Service for Listed Companies

To provide employees of listed companies and other organizations with opportunities to learn more about securities markets and asset building as part of training and study sessions, we began a service that dispatches staff who are well-versed in finance and capital markets as lecturers. The lectures aim to help attendees realize their own optimal asset building by enhancing their financial literacy and increasing their interest in asset management. Therefore, the lecture contents are flexibly customized to meet individual needs and include topics such as “How to employ your money to achieve your life plan” and “Pointers for using DC/DeCo and NISA defined contribution pension plans.”

This service was used mainly as part of in-house training and new employee training. The lectures were held for approximately 100 companies and organizations and were attended by more than 4,700 individuals in FY2018.

## Visits to JPX Facilities

To give everyone a better firsthand understanding of securities exchanges, JPX opens its facilities to various groups and individuals from elementary school children through to university students and the general public.

In FY2018, over 63,000 persons in total visited TSE Arrows in Tokyo and OSE Gallery in Osaka.

### TSE Money-bu-jpx.com

We launched TSE Money-bu (TSE’s Money Club), a website for promoting asset building to retail investors, where we broadcast information daily (currently available only in Japanese).

The purpose of this website is to help as many people as possible to engage in asset building by providing information about the importance of asset building through long-term, diversified investment. The site presents stories about the role of money in familiar situations, using language that is accessible even for novice investors.

The site is also intended to disseminate information to a wider range of individuals. For example, the site includes explanatory videos, infographics which explain things in an easy-to-understand visual form, and articles especially for the elderly focusing on a future where people will live to 100 years old.

### Online Courses

To provide opportunities to learn about finance and economics for those who are unable to attend seminars, from April 2018 TSE has collaborated with the NTT DOCOMO subsidiary DOCOMO gacco to offer online courses on asset building. The course in 2019 was titled “2019’s the time for asset building: More ease, more benefits!” More than 15,000 people (40% of whom had had no previous investment experience) have taken the course, and 80% of those who had completed the course stated that they would like to take more advanced courses on investment and asset management.

The Spread of ESG Investment

In recent years, ESG investments have been spreading rapidly. These take into consideration ESG (environment, society, and governance) elements from the perspective of evaluating corporate sustainability and corporate value over the medium- to long-term.

JPX has been making efforts to promote ESG investment, including the formulation of the Corporate Governance Code and the listing of ESG-related products. In the years to come, JPX will work together with its stakeholders to advance their efforts and, as a listed company, will promote ESG-related efforts to improve the corporate value of our own company.

Providing Information to and Promoting Dialogue with Listed Companies and Investors

To encourage mutual understanding and dialogue about ESG issues between listed companies and investors, JPX held a symposium on ESG, and in June 2019, translated into Japanese the "Model Guidance for Companies on Reporting on ESG Information" prepared by the Sustainable Stock Exchanges (SSE) Initiative. We anticipate that this will be a help to listed companies when considering ESG-related disclosure.

Listing of ESG-Related Products and Highlighting Company Activities

To promote ESG investment, JPX calculates ESG-related indices, lists ESG-related ETFs, and has set up an infrastructure fund market and an information disclosure platform for green and social bonds. Also, to provide retail investors with opportunities and materials to consider when making investment decisions, we select and publish lists of companies on certain themes: those that encourage female participation, and those that manage employee health and productivity from a strategic perspective.

Promoting the Spread of TCFD Recommendations

The Task Force on Climate-related Financial Disclosures (TCFD) is a privately-led task force established in 2015 at the request of the G20 Finance Ministers and Central Bank Governors’ Meeting. A final report was issued in June 2017 aimed at encouraging individual financial institutions and corporates to ascertain and disclose the financial impact of “risks” and “opportunities” brought about by climate change.

JPX announced its support for the final TCFD recommendations in October 2018. Subsequently, Mr. Mark Carney, Governor of the Bank of England and then Chair of the Financial Stability Board (FSB), and Ms. Mary Shapiro, a TCFD special advisor who was formerly Chair of the U.S. Securities and Exchange Commission (SEC), were invited to exchange views on climate change and finance. We are also promoting the spread of TCFD recommendations, through activities such as holding a symposium entitled “Company-investor Dialogue on TCFD: Future Prospects” jointly with the Financial Services Agency, and participating in the TCFD Consortium.
Contributing to International Organizations

World Federation of Exchanges (WFE)

An industry association composed of members from exchanges and clearing organizations around the world, WFE is engaged in making policy recommendations and conducting surveys and research about capital markets as well as in the collection and provision of statistical data. WFE also supports the development of market infrastructure by facilitating information sharing among members and by providing technical support for emerging exchanges. Recent important themes for WFE activities include regulatory dissonance and market fragmentation in international financial markets, technology-related policies including initial coin offerings (ICOs) and crypto-assets, and ESG issues in market structure.

JPX supports the work of WFE by actively participating in the activities of the WFE Board of Directors and Working Committees, in particular by serving as vice-chair of the Sustainability Working Group.

Asian and Oceanian Stock Exchange Federation (AOSEF)

AOSEF is a regional federation of 19 stock exchanges for the Asia-Oceania region. AOSEF aims to facilitate information sharing and provide mutual technical support among member exchanges. JPX serves as the secretariat for AOSEF, promoting research initiatives while also leading the General Assembly and Working Committee.

For recent activities, we set up discussion groups on the themes of corporate governance, investor education, and information disclosure, while exchanging information and research among members. We are also planning to launch a group on the theme of sustainability, focusing on topics in which member interest is high.

Trainees from Overseas Exchanges (commissioned by JICA)

In recent years, the subject of the establishment and development of stock exchanges in rapidly growing countries in Asia has become an important topic. Commissioned by the Japan International Cooperation Agency (JICA), JPX accepts trainees from exchanges and related organizations of various countries and tailors the content of the training programs to their needs as a way of contributing to the development of their stock markets.

The training is primarily geared to core business operations, such as listing examination and management, trading, trading participant systems, clearing and settlement. Also included are discussions on the latest topics, such as fintech and sustainability, and lectures are given by the person in charge of each department. In addition to the multinational training program, more recently, JPX has provided training with a focus on nurturing the securities market of Myanmar, a country to which Japan has been providing support on the development of its capital market. JPX is also supporting the development of Myanmar’s securities market by supporting the operation of Yangon Stock Exchange.
Facilitating Studies and Research

JPX Working Papers

JPX conducts studies and research on changes in the market structure and regulatory environment with a view to enhancing its competitiveness. The results of such studies are compiled and published by JPX officers and employees with contributions from external researchers. These papers are published to invite broad commentary from academia, research institutions, market users, and related parties.

In addition, we actively use JPX Working Papers to widely share, throughout the industry, knowledge obtained from fintech-related initiatives at JPX. So far, in addition to various studies on the applicability of blockchain/distributed ledger technology to financial market infrastructure, we have announced the introduction of robotics process automation (RPA) throughout the JPX Group and the use of machine translation for timely disclosure materials.

Joint Research with The University of Tokyo

JPX collaborates with The University of Tokyo to conduct research on technologies and system design for the stable and efficient operation of financial instruments exchange markets. JPX’s finance research team is working with the research team under Professor Kiyoshi Izumi at the Department of Systems Innovation, School of Engineering of The University of Tokyo, to bring together their areas of expertise as a way of driving forward research into the use of artificial market simulations to virtually recreate conditions that cannot be observed in the actual market. The results of such joint research are published in the form of JPX Working Papers.

JPX Study Group on the Financial Instruments and Exchange Act

JPX provides a platform for a study group on the Financial Instruments and Exchange Act to make research outcomes on the various legal issues related to the financial instruments and exchange market broadly available in Japan and overseas.

This study group is composed of more than 20 leading researchers, who generally meet once a month to make reports and hold discussions.

Along with posting the minutes and reports of this study group on the JPX website, the reports are periodically compiled into publications that are distributed to researchers and related organizations.
3. The Foundations of Value Creation

Initiatives for Realizing an Affluent Society

Engagement with Shareholders and Investors

Engagement with Shareholders and Investors

JPX is focusing its efforts on promoting two-way communication with its shareholders and investors, and building relationships of trust based on mutual understanding. JPX actively provides investors with the corporate information necessary for their decisions and shares views obtained from shareholders and investors with senior management, thereby further enhancing corporate value.

Engagement with Shareholders

Shareholders Meeting

JPX sees the annual general shareholders meeting (AGM) as a valuable opportunity to engage in constructive dialogue with its shareholders, so they can deepen their understanding of the company. Therefore, every year, to allow more shareholders to attend, we hold the meeting early, avoiding the days on which many other companies hold their AGMs. JPX held its shareholder AGM for FY2018 (April 1, 2018 to March 31, 2019) on June 19, 2019, with 2,375 shareholders in attendance.

The notice of the shareholder AGM is sent out three weeks ahead of the meeting to ensure that shareholders are given sufficient time to decide how to exercise their voting rights. With regard to electronic information, the Japanese and English versions of the notice are made available on the JPX website four weeks prior to the meeting and are also simultaneously available to overseas shareholders via the Electronic Voting Platform for Institutional Investors provided by Investor Communications Japan, Inc. (ICJ). In addition, JPX is promoting the use of more color and graphics in the AGM notice as part of its efforts to present the information in a more easily understandable form.

The AGM is attended in person not only by the directors and executive officers of JPX, but also directors from subsidiaries and affiliates. This is so that the broad range of shareholder questions, which cover activities of the whole group, can be appropriately answered by the correct people, including those from subsidiaries. We also upload videos of the AGM to the JPX website for those who were unable to attend on the day.

Shareholders may send in their votes via the Internet or the Electronic Voting Platform, as well as by post. At the AGM held on June 19, 2019, approximately 90% of voting rights were exercised.

WEB Shareholders Meeting

https://www.jpx.co.jp/english/corporate/investor-relations/shareholders/meeting/
Engagement with Institutional Investors and Analysts

IR Meetings

JPX senior management reaches out to domestic and overseas institutional investors and analysts in face-to-face meetings. In FY2018, JPX held five separate investor roadshows across Europe, the U.S., and Asia. We are also striving to increase opportunities for dialogue with institutional investors and analysts, for example by participating in IR conferences both in Japan and abroad. Opinions received from institutional investors and analysts through such meetings are provided periodically to management and related departments, and then reflected in JPX management practices.

Earnings and Medium-Term Management Plan Presentations, JPX IR Day

In FY2018, in addition to holding two earnings presentations, JPX gave a presentation for its newly announced 3rd Medium-Term Management Plan in March 2019. The company also provided opportunities for investors to exchange views with the Group CEO and top management of the JPX subsidiaries at the JPX IR Day 2018, our second stand-alone IR event. Video and audio recordings of each meeting are made available in Japanese and English as early as the same day. In this way, JPX is committed to providing domestic and overseas investors with timely information.

Engagement with Retail Investors

We held a total of 14 JPX outreach events, reaching approximately 2,500 retail investors by participating in major domestic IR events, including TSE IR Festa, face-to-face seminars held at securities company branches nationwide and live online seminars.

JPX also actively provides information to retail investors on its IR website. In addition to providing content that offers an overview of JPX in an easily understood format, we deliver documents, videos and other content from IR events in a timely manner.

3. The Foundations of Value Creation >> Initiatives for Realizing an Affluent Society

Engagement with Market Users

Building collaborative relationships based on confidence and trust among market participants is essential for operating sustainable markets. JPX provides a range of opportunities for dialogue with market users. These dialogues allow JPX to bring more transparency to market operations and create more convenient markets.

Engagement with Trading Participants

Market Operating Committee

TSE and OSE, operators of JPX markets, are each equipped with a Market Operating Committee as an advisory unit to the Board of Directors composed of outsiders from academia, securities companies, institutional investors, and other areas of expertise. With the aim of creating more convenient markets, outside expert opinions are considered in decisions on important matters, such as listing new products, establishing new markets, and revising rules or frameworks.

Exchanges of Views with Securities Company Representatives and Others

JPX believes that communication with securities companies is very important to improve exchange operations. We hold discussion meetings and roundtables, as appropriate, with representatives of trading participants and others, as we consider them effective venues to promote mutual understanding among top management and deepen relationships of trust. We also have closer dialogue with securities companies and institutional investors on a technical level, and do our best to change the trading system in line with changes in actual trading conditions. In fact, the below changes were implemented recently based on such exchanges of views.

Revision of ETF Market Making Scheme in April 2019

Originally, the market making scheme for ETFs was a liquidity improvement measure with a focus on retail investors. However, as a result of calls from larger institutional investors for increased order volumes, we have revised the scheme for a limited number of products to ensure a volume of orders large enough for large institutional investors to trade.

Review of Trading System to Improve Market Function Scheduled for November 2019

We received requests, primarily from overseas institutional investors, to improve execution rates for Itayose* trades at the end of the afternoon session (“Obike”). As a result of exchanges of views with trading participants, we are updating our price stabilization measures (continuously contracted quotes), as well as changing the trading system in order to conduct closing Itayose with wider price ranges.

* An auction method which looks for matching buy and sell orders, then uses that price to execute all orders.
Engagement with Investors

JPX undertakes a range of activities and provides information to raise its corporate profile, build the JPX brand, and deepen public understanding of its role in securities markets.

■ TSE IR Festa

Since 2007, TSE IR Festa has been providing retail investors and listed companies with a venue to meet each other. Supported by many exhibiting companies and retail investors, the TSE IR Festa has grown to become one of the largest IR events in Japan. As well as IR briefings and booth exhibitions by listed companies, the event sees briefings on products such as ETFs and REITs, and seminars aimed at improving financial literacy; this way, the event can be useful not just for those with a wealth of investment experience, but also those who are just considering making a start in investment.

■ JPX Concerts

As part of our cultural contribution activities, we have been holding JPX concerts focusing on classical music since 2016. In FY2018, we held a concert in Tokyo featuring a string quartet with members of the New Japan Philharmonic Orchestra. We also co-sponsored the Special Concert of Four Orchestras in Osaka Featuring Yutaka Sado at the 57th Osaka International Festival, and we were uplifted by the exquisite tones of classical music. While working to realize a richer, more affluent society, we hope that the JPX concerts will serve as a catalyst for people to feel more familiar with JPX.

■ First and Last Trading Days of the Year

JPX holds ceremonies at the Tokyo and Osaka exchanges to celebrate the first trading day of each year and the end of the year’s trading. At the end of year ceremony in Tokyo, celebrities and various people in the news grace the event as special guests and convey their messages to investors. The general public can gain attendance to the ceremonies, via a lottery or on a first-come-first-served basis, or watch recordings from the ceremonies on JPX social media.
Human Resources

Human resources are one of the prime assets for enabling JPX to sustainably increase its corporate value. In order to bring the best out of each and every employee, JPX endeavors to create workplaces where employees find it easy to work.

Human Resources Development

JPX has created an environment where employees can actively master specialized knowledge, access the latest information, and pursue a broad perspective and free and creative thinking. According to employees’ length of service and job responsibilities, the programs provided vary and encompass career development training to enhance knowledge and skills; skills development training to acquire foreign languages and expertise; professional development training to obtain an MBA or other advanced degrees at overseas universities; and more.

Promoting Diversity

For JPX, “promoting diversity” means for each and every employee to have mutual respect for other employees with differing values and lifestyles. In short, JPX believes that, by accepting diversity, individual employees will be able to work energetically and create new value (innovation) that leads to overall organizational growth. Based on those beliefs, JPX is promoting the development of a work environment that accepts and supports ways of working which fit with diverse values and lifestyles. From the viewpoint of supporting employees’ desire to remain in the workplace, we are advancing initiatives to give impetus to the active participation of a variety of employees. These initiatives include introducing support systems for employees living with illness as well as for maternity/childcare and adult caregiving, promoting women’s careers, and enhancing the post-retirement reemployment system to meet diverse workers’ needs. By continuously implementing a raft of measures to reform working culture throughout the company, we are also aiming to create more comfortable workplaces and build a more robust organizational foundation for the future.

Supporting the Balance between Various Lifestyles and Work

Improving Maternity/Childcare and Adult Caregiving Support Systems

At JPX, we are working to create comfortable working environments so that employees with limited time—for example, due to childcare, adult caregiving or treatment for illness—can make the most of their abilities. In particular, to make it possible for male employees to participate in childcare and housework, we introduced parental leave as a type of paid leave, and built an environment where employees feel comfortable using it. As a result, in FY2018 the number of male employees who took parental leave more than tripled compared with FY2015. We also introduced leave and days off exceeding the legal requirement for adult caregivers, and a system for flexible shortened working hours. Leave for adult caregivers can be taken in daily, half-daily or hourly units, and we also hold “caregiver seminars” every year in support of balancing work and caregiving. The caregiver seminars provide information and promote understanding of adult care, so that employees shouldering this burden, the number of which is expected to increase in the future, can continue to balance caregiving with work.
Career Advancement for Female Employees

From the viewpoint of boosting female employees’ careers by encouraging them to participate and contribute to a higher level, we have advanced a variety of initiatives, including career training programs for female employees and supporting networking with career-minded female employees from other companies. From FY2019 onward, we plan to implement measures to give added impetus to the development of female employees. JPX has set a numerical target of at least 8% female employees in managerial positions (6.1% as of April 2019) to be achieved through the above measures by FY2022. In the years to come, we will continue to increase the ratio of women in managerial positions, with a view to cultivating and securing human resources with the skills needed for director and executive positions.

The Re-employment System

JPX has a contingency re-employment system that enables employees to select part-time work after reaching the statutory retirement age. Through this system, JPX is working to keep valuable human resources, while making it possible for re-employed employees to continue working.

Employment of People with Disabilities

Under the principle of “Competency (Harnessing Employee Talent)” laid out in the JPX Creed, in addition to encouraging female employees and those of advanced age to actively participate in the workplace, JPX also offers employment opportunities for persons with disabilities according to the individual’s abilities and aptitudes.

Health Management

JPX believes that the health of each individual employee is essential for our employees to fully leverage their competencies. JPX is, therefore, working to maintain and promote health, while at the same time striving to grasp the health condition of all of our employees to aid early detection. JPX also provides monetary assistance for examinations to facilitate the early detection of a range of cancer types.

Mental Health

JPX has made both internal and external counseling available to ensure that employees can work while maintaining both their physical and mental well-being. In addition to enabling interviews with psychiatrists as needed, we also provide information on the prevention of mental illness. In recent years, we have carefully conducted mental care not only for mental disorders but also for employees returning from medical treatment.

Safety and Health Initiatives

In order to provide a safe and healthy work environment, JPX organizes a monthly health and sanitation committee, conducts workplace inspections by an occupational health physician, manages long working hours and late-night work, and conducts stress checks.
Pick Up  
Implementation of Work Style Reform Program

As a response to internal and external environmental changes, as well as human issues, JPX is implementing working style reforms through flexible business operations and working to improve productivity, so that the entire JPX organization can achieve sustainable growth.

For JPX, the work style reform program is a collaboration between the company and its employees. With this approach, JPX is undertaking initiatives to create an environment that allows greater flexibility in work styles and create more off hours. The reform is expected to change employees’ mindset about work hours and productivity, as well as their work styles, and to provide more opportunities for off-hour activities that will be reflected at work.

Targets for Work Style Reforms

In order to allow employees to spend more time on activities outside of work, JPX is advancing work style reforms on a company-wide scale with numerical targets for reducing overtime hours and using annual paid leave.

**Work Style Reforms at JPX**

| Prevention of Overworking | Every month, we conduct checks into working hours, including of those at the managerial level. To prevent long working hours from harming an employee’s health, we try to ascertain their health situation at an early stage based on our own standards. |
| Diversifying leave systems | JPX has instated systems for Professional Development Leave and Leave to Accompany Spouse in such cases as when an employee chooses to study abroad or his/her spouse is given an overseas assignment, allowing for flexible work styles that adapt to employees’ diverse life plans. |
| Reemploying former employees | JPX also has a program in place for reemploying individuals who decided to resign from JPX in the past for such reasons as parenting. This program offers ambitious and talented former employees an opportunity to once again contribute to and excel at JPX. |
| Increasing opportunities for employees to engage in off-hour activities | JPX supports employees who would like to engage in activities for personal development during the extra time available thanks to work style reforms. JPX is raising the amount of subsidies offered and expanding the number of eligible courses for skills development training. |
| Reforming corporate culture | JPX is working on reforming the corporate culture and encouraging employees to reevaluate their work ethics and behavior by offering lectures on work style reforms, running e-learning courses, regularly providing information, calling out directly to employees, and so forth. |
| Joining Iku-boss Enterprise Alliance | Managers or bosses will play the greatest part in achieving work style reforms, thereby creating more flexibility in employee work styles and more off hours. With the workforce becoming diverse, JPX has joined the Iku-boss Enterprise Alliance to help promote our work style reforms, and is working on nurturing executives and managers as Iku-boss, ideal bosses of the new generation. |

Notes: 1. A network of companies that recognize the necessity of Iku-boss, dedicated to improving such awareness among managers and to developing them as ideal bosses of the new generation, where the life of employees diversifies.
2. A boss (male/female manager or corporate executive) who allows staff to balance work and family commitments and to pursue career development while achieving business targets, as well as enjoying his/her own work and private life.

Towards a Cheerful, Rewarding, and Harassment-Free Work Environment

JPX pays close attention to individual rights and safety in the workplace to create an environment where all employees are able to work as productively as they can without any worries. Therefore, JPX stipulates “respect for human rights and prohibition of discrimination” in its Charter of Corporate Behavior, which prohibits all forms of harassment based on gender, seniority, maternity/paternity, and any other personal attributes, as well as unfair discrimination against those who identify as LGBT. We ensure that all employees easily and safely consult with the relevant contacts in the event they are victims of or witness any type of harassment. JPX employees have access to direct consultations with HR and also a Compliance Hotline that also accept anonymous correspondence. We also provide detailed training to raise understanding of harassment and appropriate action for eliminating harassment.

We will continue these efforts to provide workplaces where employees can work with confidence and motivation and be free from discrimination or harassment in all its forms.
The Environment and Regional Communities

JPX aims to contribute toward the realization of a sustainable society and actively implements initiatives to reduce its environmental footprint. JPX also takes steps to raise environmental awareness among its employees through activities such as tree planting and community cleanup programs.

In addition, JPX actively participates in events to give back to local communities that provide it with invaluable support on a day-to-day basis.

Contributing to the Environment

Reducing Our Environmental Footprint

As part of its activities to reduce its environmental footprint, JPX is cutting down its power consumption for lighting, air conditioning, and other purposes. For example, JPX updated equipment in the TSE building, its main business site, after the securities industry established a voluntary power consumption reduction target for itself in 2008. JPX has also worked to raise the environmental awareness of its employees. In response to the greenhouse gas emission targets set for the five years from FY2015 to FY2019 under the Tokyo Metropolitan Environmental Security Ordinance (17% reduction from the average emissions released from FY2005 to FY2007), JPX has continued to strive to reduce power consumption, namely by replacing air-conditioning equipment and hot-water supply equipment, switching to LED lighting, and reducing lighting sources in common areas. As a result, JPX was able to reduce emissions of greenhouse gases from the TSE building in FY2018 by 10% compared with the emissions targets. (See page 60 for data.)

In addition, overall energy use at JPX, including data centers, has decreased. While the enhancement of backup systems in recent years has led to the need to expand facilities, JPX has improved the energy efficiency of its infrastructure and reduced overall energy use. Going forward, we will continue to strengthen our environmental management systems and reduce our environmental footprint in our contributions to the creation of a sustainable society.

Tree-Planting Program

The TSE Listing Forest began in June 2004 in Yurihonjo, Akita Prefecture. Each year, saplings are planted at the five-hectare plot with the hope that the exchange will grow and prosper along with newly planted trees.

Together with these conservation activities, JPX worked alongside the local Yajima region, which cooperated on these conservation activities, in providing financial education. At Yashima Junior High School, JPX held an on-site course entitled "How Stock Companies Work", and organized a study session with staff at the city’s Yajima Branch Office to consider the importance of life planning and financial education. In the city of Yurihonjo, Akita Prefecture, an NPO established to run the JPX Entrepreneur Experience Program under its own direction has initiated projects—for example at Akita Prefectural University, Akita Prefectural Nishime High School and Akita Prefectural Yashima High School—with the cooperation of commercial enterprises, academia, government, and financial institutions. The NPO has developed a finance and economy education program integrated throughout the local community, to the extent that in February 2019 it won an award from the Government’s Small and Medium Enterprise Agency.

Contributing to Regional Communities

Every year, JPX participates in "Chuo City Marugoto Museum" (literally, all of Chuo City is a museum) to make the area that is home to TSE a living museum. For the event, JPX awards original merchandise bearing the JPX logo as prizes in lucky draws.

JPX’s other contributions to local communities include participating in cleanup programs in Tokyo’s Kabutocho district.

Adoption of IFRS
JPX has adopted the International Financial Reporting Standards (IFRS) to facilitate comparisons of financial results of JPX with those of other exchanges located overseas and to increase investor convenience.

Summary of Performance
In FY2018, JPX recorded operating revenue of JPY 121,134 million (0.4% increase from the same period of the previous fiscal year [i.e., year on year]), and operating expenses were JPY 54,111 million (6.3% year-on-year increase). As a result, JPX recorded operating income of JPY 69,535 million (3.1% year-on-year decrease) and income before income tax of JPY 70,786 million (3.0% year-on-year decrease).

In addition, net income attributable to owners of the parent company after tax was JPY 49,057 million (2.8% year-on-year decrease).

Consolidated Statement of Income
Operating Revenue
Operating revenue in FY2018 increased by 0.4% to JPY 121,134 million from FY2017.

1. Trading services revenue

Trading services revenue comprises “Transaction Fees” based on the value of securities traded or volume of derivatives traded, “Basic Fees” based on the types of the trading participant’s trading qualification, “Access Fees” based on the number of orders, and “Trading System Facilities Usage Fees” based on the types of trading system facilities used.

During FY2018, trading services revenue decreased 6.0% year on year to JPY 48,660 million, due mainly to a decrease in transaction fees resulting from a year-on-year decrease in trading volumes of cash equities from the previous year.

2. Clearing services revenue

Clearing services revenue comprises clearing fees related to the assumption of obligations of financial instrument transactions carried out by Japan Securities Clearing Corporation.

During FY2018, clearing services revenue increased 5.6% year on year to JPY 24,788 million.

3. Listing services revenue

Listing services revenue comprises “Initial/Additional Listing Fees” that are received based on the issue amount when a company initially lists or when a listed company issues additional shares, and “Annual Listing Fees” received from listed companies based on their market capitalization.

During FY2018, listing services revenue decreased 3.6% year on year to JPY 14,025 million due to decreases in initial/additional listing fees, mainly resulting from a year-on-year decrease in the amount raised by listed companies.
4. Information services revenue

Information services revenue comprises revenue related to the provision of market information to information vendors, etc., which is market information fees, revenue related to the index business, and revenue related to the provision of corporate action information and other information.

During FY2018, information services revenue increased 5.8% year on year to JPY 21,029 million due mainly to increases in market information fees and index business revenue.

5. Other operating revenue

Other operating revenue includes the following main items:
- Usage fees for arrownet, which connects trading, market information, and other systems to trading participants and other users;
- Usage fees related to co-location services that allow trading participants, information vendors, and other users to install devices in the system center for the purpose of improving trade execution efficiency by shortening order transmission time, etc.;
- Revenue from provision of trading system and other services; and
- Revenue from system development and operations conducted by consolidated subsidiary TOSHO SYSTEM SERVICE CO., LTD.

During FY2018, other operating revenue increased 14.4% year on year to JPY 12,630 million due mainly to increases in revenue from usage fees for arrownet and usage fees related to co-location services.
Operating expenses

During FY2018, personnel expenses increased 1.6% year on year to JPY 16,584 million.
Rent expenses on real estate increased by 0.9% year on year to JPY 3,939 million.
System maintenance and operation expenses include expenses related to maintenance and management/operations of various systems including the cash equities and derivatives trading systems.
System maintenance and operation expenses decreased 1.7% year on year to JPY 11,898 million.
Depreciation and amortization increased by 24.0% year on year to JPY 11,699 million.
Other operating expenses increased by 9.3% year on year to JPY 9,989 million.

Note: Starting FY2015, a portion of expenses relating to subsidiary Tosho System Service Co., Ltd. is included under “System Maintenance & Operation Expenses” rather than “Other.”

Basic Policy for Allocation of Profit

JPX adopts a dividend policy with a target payout ratio of about 60% tied to business performance while giving due consideration to the importance of internal reserves for the following purposes:
• Maintaining sound financial health as a financial instruments exchange group;
• Preparing for risks as a clearing organization; and
• Enabling the corporate group to pursue investment opportunities to raise the competitiveness of its markets as they arise.

In line with this policy, the dividends for FY2019 are planned to be JPY 52 per share (JPY 26 per share at the end of the second quarter).

(As of July 31, 2019)
