

January 13, 2021  
Tokyo Stock Exchange, Inc.

## **CONNEQTOR's go-live date (February 1) has been set**

Tokyo Stock Exchange, Inc. (TSE) has been developing RFQ (Request for Quote) functions and CONNEQTOR with the aim of improving the liquidity of ETFs.

We are pleased to announce that development has been successfully completed and CONNEQTOR will go live on February 1, 2021. Please refer to our website for an overview of the system and the securities companies that support it. (<https://www.jpx.co.jp/english/equities/products/etfs/rfq-platform/index.html>)

CONNEQTOR will continue development to add functions. The content and timing of these additions will be flexible based on requests from users. CONNEQTOR was created to allow institutional investors to trade ETFs "faster and cheaper". We will continue to make improvements for better execution, so please send us your comments if you notice anything, regardless of whether you use the service or not.

### **<Additional functions of CONNEQTOR>**

Scheduled for release in January to March 2021.

① Limit order function: A function that automatically asks for a trade if the price goes above (below) a specified price.

② English language support: Allows users to complete transactions in English.

To be released in April 2021 or later.

③ Register as a favorite: Any ETF can be displayed initially. No need to register ETFs again and again.

④ Direct connection: Provides a direct connection to the execution system, allowing it to be handled as part of an electronic trading.

⑤ Price including commission: It is possible to request a price including commission, making it easier to grasp the total amount.

Note: The content and timing of the release may be subject to change depending on the requests we receive.

Moving forward, TSE remains committed to providing highly convenient trading venues for investors.
