RECORD OF CHANGES

DATE	Changes
2012/12/3	-Enacted the first edition
2020/7/27	-Changed the name of index to “Nikkei-JPX Leveraged Commodity Index” and “Nikkei-JPX Inverse Commodity Index” since a part of the component of the base index transferred from Tokyo Commodity Exchange, Inc. to Osaka Exchange, Inc. -Revised the calculation so that the index value is not less than 10% of the previous day's value
2023/4/3	-Added revisions with regard to the business transfer from to JPXI

1. Concept

The Nikkei-JPX Leveraged Indexes represent the doubled performance of the Nikkei- JPX Commodity Index and the Nikkei-JPX Commodity Sub Indexes (hereinafter “base index(es)”), and the Nikkei-JPX Inverse Indexes represent the inverse performance of the base indexes.

For instance, if a base index rises by 5% from the base index calculated from the settlement price of each component (hereinafter “settlement base index(es)”) of the previous day, the corresponding Nikkei-JPX Leveraged Index rises by 10% over the same period and the corresponding Nikkei-JPX Inverse Index falls by 5%. Similarly, if a base index falls by 5% from the settlement base index of the previous day, the corresponding Leveraged Index falls by 10% over the same period and the corresponding Inverse Index rises by 5%.

3. Calculation Methods

(1) Fundamentals

- The unit of the index value is “points” and the figure is rounded to the second decimal.
- The base index value is set at 10,000.00 points as of base date.

(2) Formula

1) Nikkei-JPX Leveraged Index Series

$$\text{Lev.Index}_{t,d} = \text{Lev.Index}_{s,d-1} \times \max \left\{ 1 + 2 \times \left(\frac{\text{Index}_{t,d}}{\text{Index}_{s,d-1}} - 1 \right), 0.1 \right\}$$

Where;

$\text{Lev.Index}_{t,d}$ is: the value of the Nikkei-JPX Leveraged Index calculated from the value of the base index observed at time “t” on day “d”.

$\text{Lev.Index}_{s,d-1}$ is: the value of the Nikkei-JPX Leveraged Index calculated from the value of the settlement base index on day “d-1”.

$\text{Index}_{t,d}$ is: the value of the base index at time “t” on day “d”. (NB: The value of $\text{Index}_{t,d}$ is calculated using the base settlement index when the settlement price of each component is fixed after closing of a day session)

$\text{Index}_{s,d-1}$ is: the value of the settlement base index on day “d-1”.

2) Nikkei-JPX Inverse Index Series

$$\text{Inv.Index}_{t,d} = \text{Inv.Index}_{s,d-1} \times \max \left\{ 1 - 1 \times \left(\frac{\text{Index}_{t,d}}{\text{Index}_{s,d-1}} - 1 \right), 0.1 \right\}$$

Where;

$\text{Inv.Index}_{t,d}$ is: the value of the Nikkei-JPX Inverse Index calculated from the value of the base index observed at time “t” on day “d”.

$\text{Inv.Index}_{s,d-1}$ is: the value of the Nikkei-JPX Inverse Index calculated from the value of the settlement base index on day “d-1”.

$\text{Index}_{t,d}$ is: the value of the base index at time “t” on day “d”. (NB: The value of $\text{Index}_{t,d}$ is calculated using the base settlement index when the settlement price of each component is fixed after closing of a day session)

$\text{Index}_{s,d-1}$ is: the value of the settlement base index on day “d-1”.

4. Treatment of the Index Value

(1) Publication of the Indexes

JPX Market Innovation & Research, Inc. (“JPXI”) and Nikkei Inc. (“Nikkei”) calculate the Nikkei-JPX Leveraged Index and the Nikkei-JPX Inverse Index, using the base settlement index and publicized once a day.

(2) Retroactive calculation of past index value

The past index values of the Nikkei-JPX Leveraged Indexes and the Nikkei-JPX Inverse Indexes have been calculated retroactively back from the start date of calculation to the base date of these indices.

(3) Modification of the index value

If the base index used to calculate the Nikkei-JPX Leveraged Indexes and the Nikkei-JPX Inverse Indexes are modified retroactively, these indices may also be modified likewise.
